Description

Awesome ShockWave Effect!

Features

Add it to any script with just one line of code!

Table of Contents

How To Use	Page2
------------	-------

How To Use

Just add this line of code when you want a ShockWave to occur on the screen.

```
//Display ShockWave
ShockWave.Get().StartIt([Position],[MaxRadius],[Speed],[Amplitude]);

//Display ShockWave (if you are passing in a screen position)
ShockWave.Get().StartIt([Position], true,[MaxRadius],[Speed],
[Amplitude]);
```

Position:

This is the Position in Vector2 for a screen position, or Vector3 for a world position.

IsScreenPosition: (Optional)

Used to convey if the position is a screen position.

MaxRadius:

This is how large the ShockWave can get before fading out.

Speed:

This is how long the ShockWave will Last.

Amplitude:

This is how much distortion will be displayed within the ShockWave.

Here is a few examples of code.

```
//Display ShockWave at the mouse's position
ShockWave.Get().StartIt(Input.mousePosition,true,10f,5f,1f);

//Display ShockWave at the a gameObject's Position
ShockWave.Get().StartIt(gameObject.transform.position,0.01f,5f,
0.01f);
```

Now try some Demos!
